We assure completion of our assignment in time without any compromise on quality, for us money is secondary, what are important for us is your satisfaction and a long term relation with our clients.

The driving team behind Nexgen that backbones us to stand high are a pool of young talented and experienced professionals.

Web Designing and Development

Apart from showing ones identity websites have become a means of business development. By the development in technology and wide use of internet, online business and marketing had grown to its zenith. The best tool to complete in this online business world is an attractive, unique and innovative website. A website shows what we are and who we are. Thus for every business website had become unavoidable developing tool.

Software Development

Information is an important factor for a business even if it's stored in paper or as electronic files. But the age of keeping paper is over. The ease of accessing and processing, instantaneous retrieval, fast sharing and end of data missing had given its way to software's for every business. While developing cost effective software with a simplified user interface, we at Nexgen give importance to data security thereby providing an effective data management solution for our clients.

Mobile App Development

Every hand has a smartphone. The app generation has taken birth. Everything from banking to booking, buying to selling and reading to writing is done through apps that show its importance in present world. Every business develops its custom app so that their clients can use their services on the go.

Products

1) Automobi:

Automobi is a software which gives Automobile Distributors and Traders a convenient way of checking out customers. It is the complete system to control the activities of Sales and Purchases. Automobi covers the functions of ordering, dispatches, invoicing, documentation, financial accounts and stock control. It can keep a record of the store inventory, updating it when an order is processed. Automobi software allows users to input via keyboard, mouse and barcode scanner. When customer is checking out, you can either input the sales item manually by your own or by using a barcode scanner. The software will look up the item in the inventory and bring up the price. It can also calculate tax on the item and change for the customer.

5) Industros :

Industros is a comprehensive software for small and medium enterprises designed to control their production process and determine their costs. Industros includes the modules or areas like productions, sales, inventory, purchasing, treasury, accounting, payroll.
The ability of the software to execute from anywhere in the world enables the owner to run many branches and to have complete control over the industrial functionality.

Available in Java, Web and .Net Platforms.

6) Smart Learnie :

Smart Learnie aims by using the mobile devices to create pervasive learning systems and provide contextualized information to students and can promote the better assimilation of knowledge and development of skills by facilitating the interaction between teachers and students, supporting awareness and understanding of the student context, and intuitively supporting proactivity and availability. This system provides concise exercises (learning pills) to the students mobile devices; these exercises summarize key concepts just explained by the teacher and promote reflection and self-study. A Bluetooth-based environment and internet based services are designed to send the learning pills to the students in class. In the proposed system teacher needs only the mobile devices for taking class, providing lecture notes, marking attendance, internal evaluation etc. The proposed system provides an easy way of staff evaluation process. The principal of the institution can verify the staff evaluation results very easily and he can also view the student details whenever he needs it. Another major advantage with the proposed system is that, the notifications can be access at any time using the mobile devices, there is no need of visiting the notice board every time.
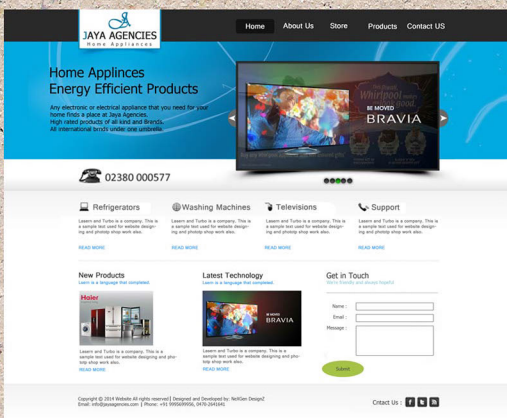

Developed in Android, Java, JSP.

7) Smart Parenting :

Smart Parenting is a mobile based application tht protect childrens from being abducted, molested or abused. By using GPS system, which enables the parents to keep a continuous vigil of their children. The parents can now easily track their children's movement and activities and ensure their safety by sketching out the safe boundary line, if the child goes beyond the boundary line, they will get the warning alerts. Using our GPS Smart Parenting system, parents can be carefree about the safety of their children despite being busy in their hectic job schedule. Our GPS child tracking system not only helps you in navigating your child's path but also inform you about breeching the norms of GPS system by giving you alerts.
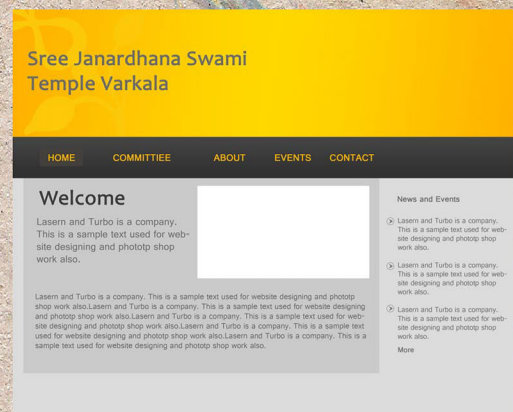

Available in Android, iOS.

Architectural Design

Today every building is unique and attractive in its design. It's because of the magical hands of architects and interior designers. We at Nexgen believe that every building should have an identity of itself and should stand apart from others ones. That's why we selected young and experienced professionals in architectural wing who are creative and have a lot of designing ideas that they have exposed in their previous works. Client's needs are furnished with their ideas which results in an outstanding design.

MEP Design

A building design requirement doesn't end up with a structural or architectural design. In addition every building requires a perfect firefighting, HVAC, plumbing and electrical design for its safe functioning. We at Nexgen, designs the perfect and cost effective MEP drawings for every buildings including shopping mall, hospitals, villas, offices, etc thereby providing u a comfortable environment.
